

PC Target

All targets produced by Kongsberg Target Systems can be powered by your own PC;

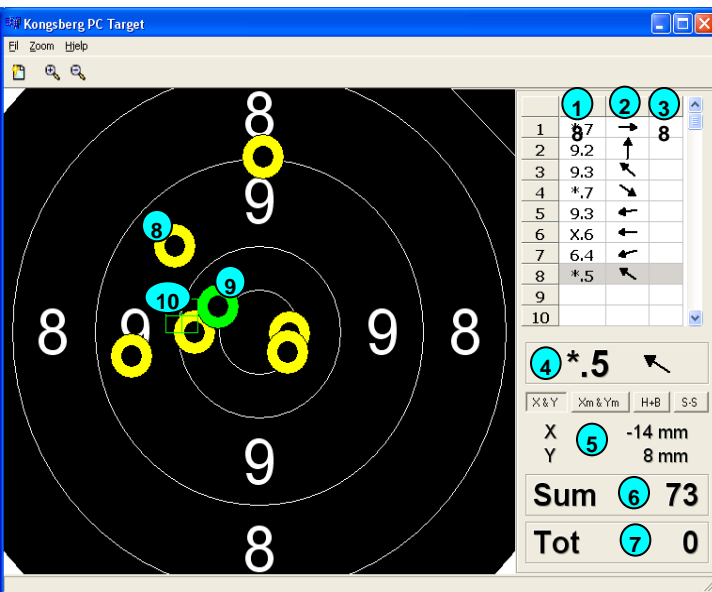

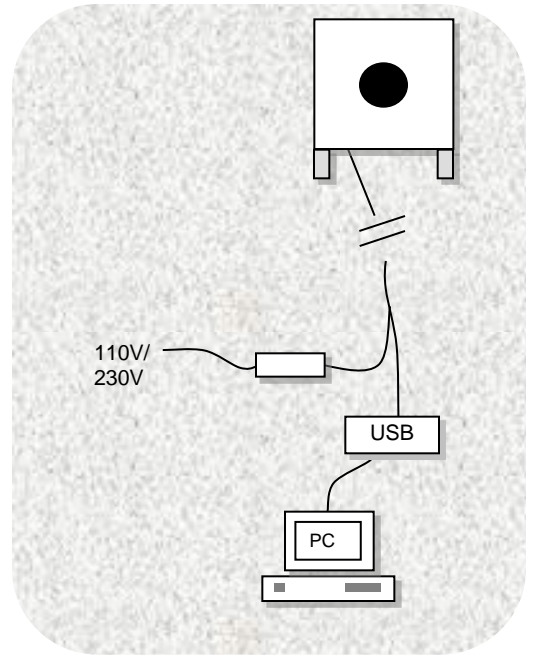

Reasonable to establish your own shooting range.

This solution is limited to 1 target per PC.

At distances up to 100m, the power supply is at the firing point; both power and signal use the same cable to the target..

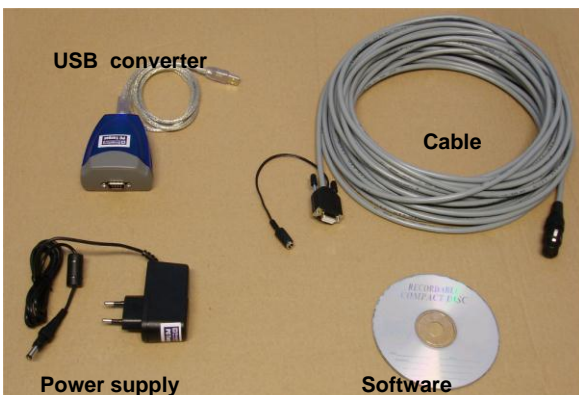

At distances above 100m, the power supply is close to the target, and it's only a signal cable from the firing point.

Radio communication (for long range shooting) may also be installed.

1. Shot value
2. Direction of the shot or time of the shot (time only available if a target with target light is in use)
3. Shot status (only available if a target with target light is in use)
4. Last shot value or selected shot value. Select the shot by clicking on the shot value in the list
5. Shot information (X&Y coordinates)
6. Sub total score of the series
7. Total score of all series
8. Hit marking (yellow)
9. Hit marking of the last shot or selected shot (green)
10. Average hit point (X&Y coordinates)
